RESEARCH EXPERIENCE

University of Colorado Boulder Undergraduate Researcher

Research interests include topics in (broadly) theoretical computer science, especially algorithmic economics, matrix multiplication, computational social choice theory, and complexity theory.

Advised by [Rafael Frongillo](#), Ph. D.

May, 2023 - Present

- Seeking to understand and capture the design spaces of liquidity provisioning and transaction fee protocols in prediction markets and decentralized exchanges.
- Thinking about liquidity provisioning as multiple automated market makers running in parallel and resulting implications.
- Assisted Rafael Frongillo with reviewing two submissions to SODA'25 and Management Science (2023).
- Regular attendee and presenter in the algorithmic economics reading group.
- Attended EC'24, EC'25

Advised by [Huck Bennett](#), Ph. D.

February, 2025 - Present

- Seeking to develop algorithms for special cases of the MATRIXMULTIPLICATIONVERIFICATION problem using Lee and rank-metric codes and other techniques from coding theory; joint with [Noah Stephens-Davidowitz](#), Ph. D.
- Understanding the fine-grained complexity of linear algebraic problems.
